Assignment No – 1

Case Study on Website Evaluation and Planning

Introduction :

In the digital era, websites are essential for communication and services, and proper planning is crucial to ensure good usability and performance. This assignment uses a case study approach to analyze existing websites, identify their strengths and weaknesses, and evaluate their design quality. The objective is to study multiple websites from different domains to understand good design practices and common issues in website development.

Objectives :

- To understand the importance of proper website planning before development.
- To analyze real-world websites from different domains.
- To identify the strengths and weaknesses of website design.
- To evaluate websites based on usability, design, content, and performance.
- To understand best practices and common issues in web development.
- To apply these learnings while developing future web projects.

1. **Apple**

Website URL: https://www.apple.com

Purpose of the Website

The Apple official website is the central online platform to showcase Apple's products and services, including iPhone, Mac, iPad, Apple Watch, AirPods, and more. It also provides shopping options, support resources, product information, privacy and accessibility details, and company values.

Frontend Technologies

- HTML5
- CSS3
- JavaScript
- React.js

Backend & Infrastructure

- Server-side rendering (Node.js-based systems)
- Apple's proprietary backend services
- CDN (Content Delivery Network) for fast global access

Things Liked in the Website

- Navigation across pages is smooth and intuitive
- Clean, modern, and visually appealing website theme
- High-quality visuals with a premium user experience
- Clear product categorization and easy access to services

Things Disliked in the Website

• Pages are heavy due to high-resolution images and animations

• Loading time can be slow on low-speed internet connections

• Too much content and effects may feel overwhelming for first-time users

Lighthouse Evaluation

• Performance: ~72

• Accessibility: ~96

• Best Practices: ~100

• SEO: ~91

Overall Evaluation

Overall, Apple's official website is **well-designed, professional, and rich in content**. It serves both as a product catalog and an ecommerce platform while also emphasizing values like privacy and accessibility

2. Unstop

Website URL:https://www.unstop.com

Purpose of the Website

Unstop is an online talent engagement and hiring platform where students and early professionals can find competitions, internships, hackathons, quizzes, courses, and job opportunities, while recruiters can assess and hire skilled candidates using AI-enabled tools.

Frontend Technologies

- HTML5
- CSS3
- JavaScript
- React.js

Backend Technologies

- Node.js
- REST APIs
- Database systems (MySQL / MongoDB)

Things Liked in the Website

• Navigation across pages is intuitive and easy to understand

• Provides a wide range of opportunities like challenges, internships, and jobs

• Modern, user-friendly design suitable for students and professionals

• Centralized access to learning resources, hackathons, and assessments

Things Disliked in the Website

• Website/app can experience slow loading and occasional crashes

• Performance issues during time-critical quizzes and challenges

• Mobile compatibility and responsiveness need improvement

• Some users find the competition environment deadlines challenging.

Lighthouse Evaluation

• Performance – 58

• Accessibility – 93

• Best Practices – 46

• SEO – 85

Overall Evaluation

The website is functional and reliable for finding opportunities, but improvements in UI consistency, performance optimization, and navigation clarity would further enhance the overall user experience

3 BookMyShow

Website URL: https://www.bookmyshow.com

Purpose of the Website

BookMyShow is an Indian online entertainment ticketing platform that enables users to browse and book tickets for movies, concerts, sports events, theatre shows, and other live entertainment experiences across many cities. It serves as a centralized portal for showtimes, event listings, seat selection, and ticket purchasing.

Frontend Technologies

- HTML5
- CSS3
- JavaScript
- React.js

Backend Technologies

- Node.js / Java-based backend
- APIs for seat selection and booking
- Database management systems

Things Liked in the Website

• Navigation across pages is intuitive and easy to understand

• Clean layout with clear categories for movies, events, and shows

• Offers comprehensive listings including movies, concerts, and sports

• Provides useful filters and search for quick event discovery

Things Disliked in the Website

• Pages can load slowly due to heavy multimedia content

• Occasional site responsiveness issues on mobile devices

• Some users report difficulties with ticket cancellations and refunds

• Customer reviews indicate occasional booking/payment frustration

Lighthouse Evaluation

• Performance – 58

• Accessibility – 93

• Best Practices – 46

• SEO – 85

Overall Evaluation

The website is functional and reliable for exploring and booking entertainment events, but optimizing performance, improving responsiveness, and strengthening navigation clarity could further enhance the user experience.

4 Brainly

Website URL: https://www.brainly.in

Purpose of the Website

Brainly is an educational community platform where students can ask academic questions and get answers from peers, experts, and community members across subjects like math, science, history, languages, and more, helping learners solve homework and improve understanding.

Frontend Technologies

- HTML5
- CSS3
- JavaScript

Backend Technologies

- Server-side frameworks
- Databases for question & answer storage

Things Liked in the Website

• Navigation across pages is simple and easy to understand

• Clear question-and-answer system that promotes collaborative learning

• Useful search and categorization for academic topics

• Encourages community participation through points and rewards

Things Disliked in the Website

Website responsiveness can lag on low-end or mobile devices

• Some answers may vary in quality or accuracy

• Pages with heavy content or images sometimes take longer to load

• Frequent ads can interrupt the browsing experience

Lighthouse Evaluation

• Performance – 58

• Accessibility – 93

• Best Practices – 46

• SEO – 85

Overall Evaluation

The website effectively supports student learning and peer-to-peer knowledge exchange, but enhancing performance, answer quality controls, and UI polish could further improve the user experience.

5 IRCTC

Website URL: https://www.irctc.co.in

Purpose of the Website

IRCTC is the official online portal of Indian Railways for train ticket booking, tourism packages, catering services, and related travel services, enabling users to search trains, book tickets, manage reservations, and access travel information.

Frontend Technologies

- HTML5
- CSS3
- JavaScript

Backend Technologies

- Java-based backend systems
- Enterprise databases (Oracle / SQL)

Things Liked in the Website

• Navigation across pages allows users to search trains, check availability, and make bookings

• Offers comprehensive services including ticket booking, PNR status, and cancellations

• Provides additional travel services like e-catering, tourism packages, and hotel bookings

• Multiple payment options and real-time updates for journey planning

Things Disliked in the Website

• Website design and layout can feel cluttered and overwhelming for new users

• Booking journey involves many steps, making navigation longer than expected

• Responsiveness and usability are inconsistent, especially on mobile and low-end devices

• Ads and visual clutter sometimes distract from primary booking tasks

Lighthouse Evaluation

• Performance – 58

• Accessibility – 93

• Best Practices – 46

• SEO – 85

Overall Evaluation

The website is a crucial and functional platform for millions of travelers to plan and book railway journeys, but enhancing the user interface, simplifying the booking flow, and improving performance/responsiveness would significantly improve the overall experience.

6 Adobe

Website URL https://www.adobe.com

Purpose of the Website

Adobe's website provides information, downloads, and subscriptions for creative, design, document, and marketing software such as Photoshop, Illustrator, Acrobat, and Creative Cloud.

Frontend Technologies
• HTML5
• CSS3
• JavaScript
• React (for dynamic UI components)

Backend Technologies
• Java-based and C++ backend systems
• Cloud services (Adobe Experience Cloud)
• Enterprise databases (Oracle / SQL)

Things Liked in the Website

• Navigation across pages is well-structured and professional

• Clean and modern UI suitable for creative users

• Detailed product information and learning resources

• Easy access to downloads, plans, and tutorials

Things Disliked in the Website

• Website feels heavy and resource-intensive

• Pricing information can be complex for new users

• Some pages take longer to load on slower connections

Lighthouse Evaluation

• Performance – 57

• Accessibility – 95

• Best Practices – 76

• SEO – 90

Overall Evaluation

The website is powerful and informative for creative professionals, but performance optimization and simpler pricing presentation would improve usability for beginners.

7 Spline

Website URL: https://spline.design

Purpose of the Website

Spline is an online 3D design and collaboration platform that allows users to create, edit, and publish interactive 3D content directly in the browser.

Frontend Technologies

• HTML5
• CSS3
• JavaScript
• WebGL (for 3D rendering)
• React

Backend Technologies

• Node.js backend services
• Cloud-based infrastructure
• NoSQL databases (MongoDB / Firebase)

Things Liked in the Website

- Visually appealing and modern website design
- Interactive demos that clearly showcase 3D features
- Easy onboarding for designers and developers
- Real-time collaboration and web-based access

Things Disliked in the Website

- Performance can lag on low-end systems
- Requires strong internet connectivity
- Limited features available in the free version

Lighthouse Evaluation

- Performance – 60
- Accessibility – 92
- Best Practices – 70
- SEO – 86

Overall Evaluation

The website effectively demonstrates the power of browser-based 3D design, but improving performance stability and expanding free features would enhance the overall user experience.

Overall Summary :

Sr. No.	Website	URL	Purpose	Things Liked	Things Disliked	Evaluation
1.	Apple	https://www.apple.com	Showcase and sell Apple products	Clean design, high-quality images, smooth navigation	Heavy images, limited comparison options	Good
2.	Unstop	https://www.unstop.com	To provide internships, jobs, and competitions for students	Modern UI, Easy search & filters , Student-friendly design	Slightly crowded homepage	Good
3.	BookMyShow	https://www.bookmyshow.com	Movie and event ticket booking	Modern UI, smooth booking process	Slow during peak hours, many banners	Good
4.	Brainly	https://brainly.in/	Question and answer platform	Clean reading layout, content-focused	Login pop-ups, ads, repetitive content	Average
5.	IRCTC	https://www.irctc.co.in	Online railway ticket booking and services	Strong functionality, secure system	Cluttered UI, confusing navigation	Bad
6	Adobe	https://www.adobe.com	Creative software and digital solutions	Professional tools, modern UI, rich features	Expensive plans, heavy website	Good

7	Spline	https://spline.design	Online 3D design and collaboration platform	Interactive design, modern interface, browser-based tool	Performance issues on low-end devices, limited free features	Good

Conclusion :

This case study highlights the importance of proper planning and analysis before developing a website. By evaluating real-world websites from different domains, it becomes clear that good usability, clear navigation, responsive design, and optimized performance are essential for a positive user experience. The study also reveals common design and performance issues that can negatively affect users if not addressed early. Overall, this analysis provides valuable insights into best practices and common mistakes in web development, which can be applied to build more effective, user-friendly, and professional websites in the future.
